

When a **Parts Order** Status is updated from Draft to Open

Create a process builder to add a record for **Inventory process log** (new Object)

Name - Auto num

Parts Order - lookup

In Error- check box

Error message- description

Processed- Checkbox

With following details

Parts Order lookup populated.

Run a batch(every min) to take all the inventory process log where  
processed=false

And get all the parts order related to them

Under Parts Order If a Line found with

Parts- Look Up to product

From Location- Lookup to Location

Qty- Number

Go to From Location and add a **Product stock** for that Product and qty

Status of stock = Available

And Mark the inventory log processed= true

**-processed=true**

-If on the Parts order no Parts order line found - mark inventory log in error = true

And error message as no line found

If line qty is not there in line- stop entire transaction-mark inventory log in error =  
true

And error message as no line qty found

If from location is not there in line- stop entire transaction-mark inventory log in  
error = true

And error message as no location info found

Line numbe-error message ,
